

Web Dev Final Project: The Weeknd: Interactive Narrative Experience

By Rafid Khan

Concept / Project Idea

Concept

An interactive narrative website inspired by The Weeknd's 10 album eras, where each album becomes its own immersive visual experience.

Overview

- Homepage features The Weeknd as the central figure surrounded by album portals
- Each album leads to a unique section with its own mood, color, and atmosphere
- Users explore the site as a **journey through different emotional and visual worlds**
- Focus on **storytelling, design, and interaction** rather than a traditional fan site

Goal + Inspiration

Inspiration

- The Weeknd's albums each have a distinct visual and emotional identity
- His discography feels like a continuous story across different eras

Goal

- Create a narrative journey through all 10 albums
- Turn each album into an immersive digital environment
- Combine design and coding to build an interactive experience

Structure + Design

Structure

- Homepage acts as the central navigation hub
- 10 album pages, each representing a different era
- About / Credits page for project context

Design

- Dark, cinematic aesthetic for consistency
- Glass UI (blurred panels) for modern feel
- Color themes change based on each album's mood

Homepage Layout

Code Snippet

From index.html

HTML

Copy

```
<a href="album-home/after-hours.html" class="album album-card" data-color="#ff2a2a">
  
  <span class="album-label">After Hours</span>
</a>
```

From style.css

CSS

Copy

```
.album:hover img {
  transform: scale(1.04);
  filter: brightness(1.1);
  border-color: rgba(255, 255, 255, 0.2);
  box-shadow:
    0 18px 32px rgba(0, 0, 0, 0.55),
    0 0 28px rgba(255, 255, 255, 0.12);
}
```

This is good for the slide because it shows:

- **HTML structure** for linking each album page
- **CSS interaction** for the hover effect

- **HTML** links each album card to its own page
- **data-color** stores a unique color for each album theme
- **CSS transform: scale(1.04)** creates a zoom effect on hover
- **filter: brightness(1.1)** makes the image feel more vivid
- **box-shadow** adds glow to emphasize interaction

Responsive Design

- Designed to work on different screen sizes
- Uses media queries to adjust layout and sizing
- Homepage shifts from a multi-column grid to a stacked layout on smaller screens
- Album images and text also scale down for better readability

CSS

```
@media (max-width: 950px) {  
  .main-layout {  
    grid-template-columns: 1fr;  
    gap: 1.5rem;  
  }  
  
  .side-column {  
    flex-direction: row;  
    justify-content: center;  
    flex-wrap: wrap;  
    padding-top: 0;  
  }  
  
  .centerpiece {  
    order: -1;  
  }  
}
```

Example + Interaction

Example Pages

Beauty Behind the Madness

- Cleaner, brighter aesthetic
- Focus on fame, identity, and contrast
- More minimal and polished look

Starboy

- Neon, futuristic, high-energy visuals
- Strong color (red/purple) to reflect persona and ego
- More intense and stylized atmosphere

Interaction

- Hover effects on album cards
- Smooth navigation between pages
- Each page feels like entering a different world

Future Plans + Conclusions + Learning + Issues

Future:

- Add music/audio for full immersion
- Add more animations and transitions
- Improve mobile experience

What I Learned:

- How to structure a multi-page website
- How to use CSS for layout and interaction
- How to deploy a live site using GitHub Pages

Challenges:

- Designing a clean layout with many elements
- Making the site responsive across screen sizes
- Organizing multiple pages and navigation

Conclusion:

- Combines design + coding
- Creates an immersive storytelling experience

Thank You!
