# Web Dev Final Project: The Weeknd: Interactive Narrative Experience

By Rafid Khan

# Concept / Project Idea

## Concept

An interactive narrative website inspired by The Weeknd’s 10 album eras, where each album becomes its own immersive visual experience.

## Overview

- Homepage features The Weeknd as the central figure surrounded by album portals
- Each album leads to a unique section with its own mood, color, and atmosphere
- Users explore the site as a **journey through different emotional and visual worlds**
- Focus on **storytelling, design, and interaction** rather than a traditional fan site

# Goal + Inspiration

## Inspiration

- The Weeknd’s albums each have a distinct visual and emotional identity
- His discography feels like a continuous story across different eras

## Goal

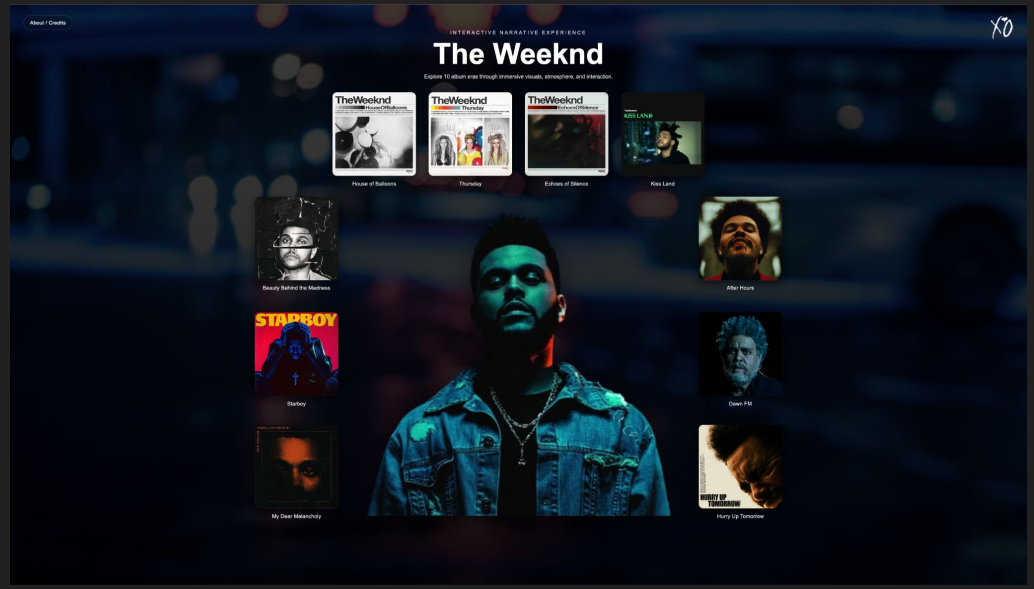
- Create a narrative journey through all 10 albums
- Turn each album into an immersive digital environment
- Combine design and coding to build an interactive experience

# Structure + Design

## Homepage Layout

### Structure

- Homepage acts as the central navigation hub
- 10 album pages, each representing a different era
- About / Credits page for project context



### Design

- Dark, cinematic aesthetic for consistency
- Glass UI (blurred panels) for modern feel
- Color themes change based on each album’s mood

# Code Snippet

**From `index.html`**

HTML

Copy

```html
<a href="album-home/after-hours.html" class="album album-card" data-color="#ff2a2a">
  <img src="images/albums/after-hours.png" alt="After Hours album cover" />
  <span class="album-label">After Hours</span>
</a>
```

**From `style.css`**

CSS

Copy

```css
.album:hover img {
  transform: scale(1.04);
  filter: brightness(1.1);
  border-color: rgba(255, 255, 255, 0.2);
  box-shadow:
    0 18px 32px rgba(0, 0, 0, 0.55),
    0 0 28px rgba(255, 255, 255, 0.12);
}
```

This is good for the slide because it shows:

- **HTML structure** for linking each album page
- **CSS interaction** for the hover effect

# Responsive Design

- Designed to work on different screen sizes
- Uses media queries to adjust layout and sizing
- Homepage shifts from a multi-column grid to a stacked layout on smaller screens
- Album images and text also scale down for better readability

CSS

```
@media (max-width: 950px) {
  .main-layout {
    grid-template-columns: 1fr;
    gap: 1.5rem;
  }

  .side-column {
    flex-direction: row;
    justify-content: center;
    flex-wrap: wrap;
    padding-top: 0;
  }

  .centerpiece {
    order: -1;
  }
}
```

# Example + Interaction

## Example Pages

### Beauty Behind the Madness

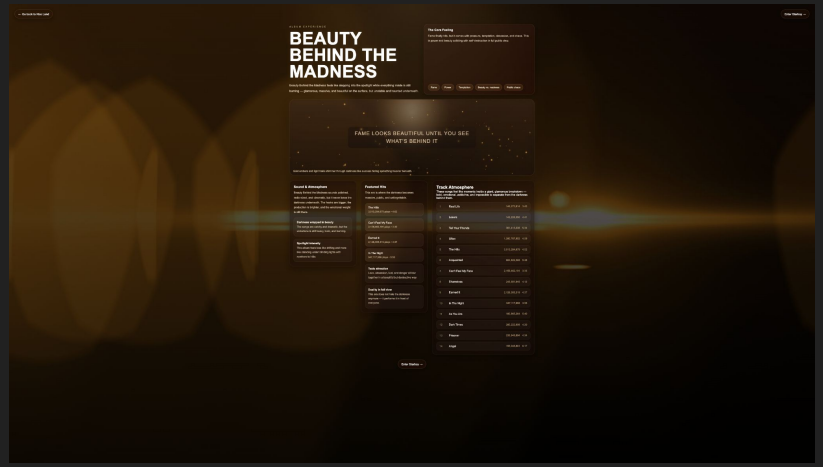
- Cleaner, brighter aesthetic
- Focus on fame, identity, and contrast
- More minimal and polished look

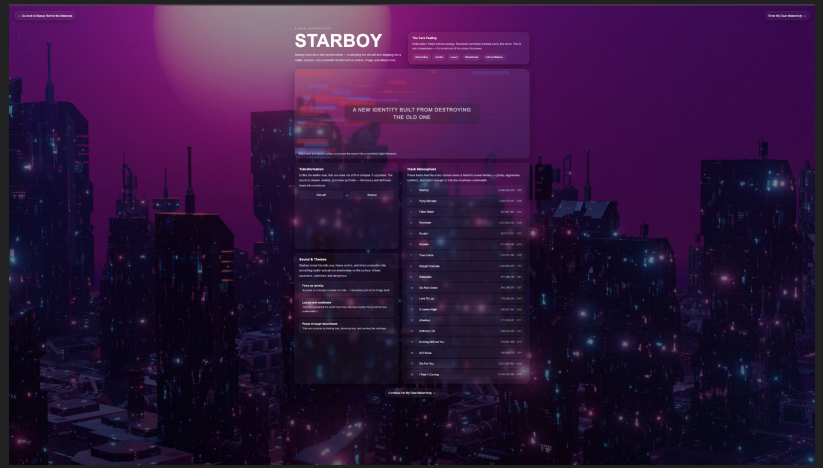
### Starboy

- Neon, futuristic, high-energy visuals
- Strong color (red/purple) to reflect persona and ego
- More intense and stylized atmosphere

### Interaction

- Hover effects on album cards
- Smooth navigation between pages
- Each page feels like entering a different world





# Future Plans + Conclusions

## Future Improvements

- Add music/audio to each album page for a full sensory experience
- Enhance animations and transitions to feel more cinematic
- Improve mobile responsiveness and layout optimization

## Conclusion

- Combines **design and coding** into one unified project
- Transforms albums into an **interactive narrative experience**
- Focuses on **immersion, atmosphere, and storytelling**

# Thank You!
